# Martel Construction takes flexibility to the next level with their hosted phone system.

Team members at Martel Construction can communicate with their coworkers, vendors, and clients from wherever with their hosted phone system. Local directories that include field mobile phone numbers, internal transferring, and the mobile softphone app are key features in Martel's effective project communication.

## Optimize

Phone users have the choice to have calls forwarded to their cell phones, use a softphone app, and receive transfers from the main office while they are out in the field -- all done with their business phone system, hosted in the cloud.

## Empower

The Granite team trained Martel Construction's in-house IT team on how to navigate the backend portal of the phone system so they can make changes on their own.

**"The biggest help that the phone system has given us, is the ability to transfer directly to a very large list of field personnel's cell phones."**

ANGIE SCHULTZ, OFFICE ADMINISTRATOR, MARTEL CONSTRUCTION

# Martel can now transfer callers to any team member, to any office, or anyone out in the field.

## TOP FEATURES

**Extension Dialing**

**Multisite Connectivity**

**Directory Listing**

**Call Tracking & Reporting**
